

Anchors in Approach Passage, Swildons have been placed. Unfortunately I didn't take a rope so the rigging diagram has not been uploaded as I do not know the length. Five anchors were placed two at each end and one as a traverse in about the middle.

This has finished CSCC resin and one anchor remains, I have requested another batch.

A request for replacement anchors on 35ft pitch, Eastwater, often known as Dolphin pitch, has been received. I with Chris Williams have had a trip in to look at the situation. Details here

https://csc.org.uk/wiki/equipment/35ft_pitch

The request form has been changed so that it can be filled in electronically.

The BCA equipment and technique group has been merged into the Training Group after the BCA vote. As yet it is unclear on how it will work.
